

Equations Of A Falling Body

By Laura Boynes

The work

Commissioned by Perth Festival, *Equations Of A Falling Body* by Laura Boynes explores how external forces such as climate and politics, impact our everyday lives, often beyond our control. Through real-time choreography, Boynes reveals the unpredictable nature of our times on both macro & micro scales and how this affects our relationships, testing our responses and capacity for resilience. Mesmerising, immediate and relevant, this performance is attuned to our post-digital age, with lasting cinematic sequences that will leave you both reflective and hopeful.

"An explosive mix of dance and physical theatre that will live long in the memory....innovative, visually stunning and memorable." [Seesaw Magazine](#)

"It's rare to see something as daring and risky as this, especially in a Festival setting, and I applaud everyone involved – but especially Boynes, for having the courage and vision to expose and embrace the unknown, in all its nakedness and terror." [Artshub](#)

The creative team

Choreographer & Director Laura Boynes
Performers Ella-Rose Trew, James O'Hara & Timothy Green
Sound Design & Composition Tristen Parr & Felicity Groom
Lighting Design Matt Marshall
Set and Costume Design Bruce McKinven
